

Choosing the right label for your application and environment

EXTREME: Harsh indoor/outdoor conditions; long term exposure to salt air and caustics; extreme temperature variations; exposure to chemicals including petroleum products; frequent cleaning and exposure to autoclave, chemicals or abrasives. Examples of extreme environments are steelworks, refineries, work in progress manufacturing and tool control.

MODERATE: Indoor or general outdoor; some exposure to chemicals or abrasives; moderate cleaning. For example, warehouse control and in-plant fixed assets.

MILD: General home, office or retail conditions where there are moderate temperatures; very minor exposure to chemicals and abrasives.

Label Material	Environment		
	Extreme	Moderate	Mild
Teflon Coated Anodised Aluminium			
Anodised Aluminium (Std or Foil)			
Plastic EPG (Asset graded adhesive)			
Standard EPG (Asset graded adhesive)			
Standard EPG			
Thermal Polyethylene			

* EPG – Electrophotographic. We print our label using electrophotographic, LED technology with flash fusing technique. This technique allows all fine detail of the print image to be preserved immaculately, creating perfect prints at every pass.

THE RIGHT ADHESIVE FOR YOUR NEEDS

Our standard range of permanent, pressure sensitive adhesive is suitable for most surfaces. However, special adhesive formulations are also available on request.
